Long-term rulebook. Every name here passed all of: price above a rising 50-day average, which is above the 200-day; price within 45% of its 52-week high; 14-day ATR under 8% of price; a 50-day base tighter than 30% with price within 6% of its top; ≥ $1M average daily dollar volume; price ≥ $0.50; market cap ≥ $25M. Score rewards tight bases, up-day vs down-day volume (*accumulation*), 3-month performance versus the S&P 500, and a healthy RSI.

How to read it. *Resistance* is the 50-day high; *To res.* is how far price sits below it (negative = already broke above). *Base range* is how tight the consolidation is — tighter is better. *Vol ratio* compares recent volume to the base average. Score 70+ is a strong setup, 40–55 is early. Canadian names are in CAD, US names in USD; results are grouped by sector within each market. Tickers link to their Yahoo chart. This is a screen, not a recommendation: confirm the chart, check recent filings for dilution or offerings, and use stops.
