How to read it. *Resistance* is the 20-day high; *To res.* is how far price sits below it (negative = already broke above). *Base range* is how tight the consolidation is — tighter is better. *Vol ratio* compares recent volume to the base average. Score 70+ is a strong setup, 40–55 is early. Canadian names are in CAD, US names in USD; results are grouped by sector within each market. Tickers link to their Yahoo chart. This is a screen, not a recommendation: confirm the chart, check recent filings for dilution or offerings, and use stops.
